T "Molecular cloning and tissue expression of FAT, the human homologue of the Drosophila fat gene that is located on chromosome 4q34-q35 and tencodes a putative adhesion molecule.";

T encodes a putative adhesion molecule.";

T encodes a putative adhesion procession PROTEIN.

- PUNCTION: COULD FUNCTION AS A CELL-ADHESION PROTEIN.

- I SUBCELLULAR LOCATION: Type I membrane procein (By similarity).

- TISSUE SPECIFICITY: EXPRESSED IN MANY EPITHELIAL AND SOME

ENDOTHELIAL AND SMOOTH MUSCLE CELLS.

- SIMILARITY: CONTAINS 5 GG-LIKE DOMAINS.

- SIMILARITY: CONTAINS 1 LAMININ G-LIKE DOMAIN.

TITLE OF INVENTION: Composition Exhibiting a von Willebrand Factor (vWF) Protease Act

TITLE OF INVENTION: Composition Exhibiting a Polypeptide Chain with the Amino Acid Sequence AAGG

FILE REFERENCE: 247.00CIP

TITLE OF INVENTION NUMBER: US/09/833,328

CURRENT FILING DATE: 2000-11-22

PRIOR FILING DATE: 2000-11-22

PRIOR FILING DATE: 2000-11-22

PRIOR FILING DATE: 2000-11-22

SOFTWARE: Patentin version 3.1

SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
